Hun fal vola skygge din?

Formlike brakender
$$\frac{x(t)}{4} = \frac{y(t)}{2}$$

$$x'(t) = 2y'(t) \implies y'(t) = \frac{x'(t)}{2} = \frac{1.5}{2} = 0.75 \text{ m/s}$$

$$x'(t) = -80$$

x'(t) = -80 y'(t) = 60 Pythagoras: 2(t) = x(t) + y(t) Darum: 22(t) 2'(t) = 2x(t) x'(t)

 $(*) 2'(t) = \frac{x(t)x'(t) + y(t)y'(t)}{2(t)}$

Demed:
$$2^{1}(t) = \frac{4(-80) + 3.60}{5} = \frac{-320 + 180}{5}$$

7.4 Omvendle funkjarer this is bejonen x, lan is vegue ut y.

Nav de fundiçasudin de y^2 $y = 2x + 3 \Rightarrow y - 3 = 2x$

y = 100: $x = \frac{100 - 3}{2} = \frac{97}{2} = 48.5$

 V_i has final en my funkaçan $x = g(y) = \frac{y-3}{2}$ som a en ancend funtisjon au f.

Gund idé: Har en funlogen y=f (x). Omhe i lår for x plik d i får en amend funlogen

Elsen pet $y = x^2$

Definisjon: En femlisjon lælles <u>injektiv</u> dersom det til hur y hårs högd in x skil at y = f(x), Sagd på en annen viole: Hus $X_1 \neq X_2$, Dá en $f(X_1) \neq f(X_2)$.

Salving: Shongl volvende of shongl out of the fundament of the short of the fundament of the short of the sho

en nijehhu. $\int_{1}^{4} (x) = 5x^{4} + 9x^{2} + 2 > 0$

Allos er f skerf voksud og demed injektiv.

Overendle funkjouer

La f: Df > Vf vær en injektiv femlesjam. Da vil del for hver y e Vf finns nögetilig in x e Df skik at y = f(x). Den amendb femlisjamen g: Vf > Df er alfinel vid at g(y) = x. Alloi y x=g(y) y=f(x)

 $X = Q(y) \iff y = \{(x)\}$

Ebrempet: Vis al f(x) = e x3+2x er virjeblik og from der anverdle fembyanen

Danieur: $\int (x) = e^{x^3+2x} \left(3x^2+2\right) > 0$

Dette hely at of en sherest volvende og dened injeldero Prover a fine den amendle funksjonen y = e x + 2x prover a lose for x:

Tar la pi ligg sider

 $Im(y) = x^3 + 2x$

 $\chi^3 + 2x - luly = 0$ line for x.

l'an i liked shafk as informasjon an du an endle funksjon

Terren: And of
$$f$$
 as in short which the short f and f are f and f and f are f and f and f are f and f and f and f are f and f and f are f are f and f are f are f are f and f are f are f are f and f are f ar

Sahing: and of for an shongh volvend of handinely funksjon. De en den amendbe funksjonen opse skrengl Vaksende/ og hantimelig.

Huadan ser grefer til den amvendle fembryen ut? y=f(x) or der apprimelige funboyonen => x=g(y)

y = f(x) or during y = g(x) where y = g(x) where y = g(x) are specifically y = f(x) on larger y = x.

Ebrempel: f(x)= x og q(x)= lux er om unde funligener
